ACKNOWLEDGEMENT

We would like to take this opportunity to thank everyone whose cooperation and encouragement throughout the ongoing course of this project remains invaluable to us.

We are sincerely grateful to our guide Prof. Bipasha Mukhopadhyay & Prof. Varsha Poddar of the Department of Computer Science and Engineering, UEM, Kolkata, for his wisdom, guidance and inspiration that helped us to go through with this project and take it to where it stands now.

Last but not the least, we would like to extend our warm regards to our families and peers who have kept supporting us and always had faith in our work.

Mohana Dutta

TABLE OF CONTENTS

- **ABSTRACT**

Web Development has been identified as a key factor for the acceptance and success of the websites and electronic commerce.

The purpose of this paper is to analyse, from a marketing point of view the main aspects that could influence online users' perceptions and behaviours, in order to achieve a successful food Ecommerce website. Our website will customer to find best value for money restaurant near by them, especially for those who are new in our city. In our website we add only 10 websites with all necessary details, and keep updating our website as per user. Our website also inform to the respected register restaurant to improve their services or cuisine as per customer review.

- Our website also going to provide a feature, to help customer to start their food business through our website without any risk of cyber-theft.

- **INTRODUCTION:**

The City of Joy is one of the hotspots of the universally famed Indian cuisine, simply because of all the culinary influences that have converged here over the centuries. Being a coastal city, there was never a shortage of seafood and it has always been a staple here. But, then when the Mughals arrived and brought with them the delight of spices, the game of Kolkata food was upped. Followed by the British who made it their seat of power for a good two centuries, during when they further diversified the taste of Kolkata. Somewhere during that time, the Chinese immigrants arrived and really revolutionized the Indian food scene with their flavours. The first taste of Indo-Chinese food was the gift of Kolkata to the rest of the country, and it has evolved into a fully developed international cuisine unto its own since then

We added most popular restaurants and some hidden food gems in Kolkata that are a must-visit to sample the best of food offered in the city and we also have a technical team to review on customer feedback and according to that they keep adding new features.

- **LITERATURE SURVEY**

We are developers searching for new unique ideas to help modern generation people with better and smooth use of websites without privacy data leakage as well as cyber-theft. Our website purpose is to help customer to find their restaurant as per their choice , we follow many food Ecommerce apps as well as website but their is no proper idea. We follow swiggy , zomato, dominos etc....As they almost same interface so we design some different interface which need less information from the user.

Advantage -

- Easy access to the user with less information and secure data privacy.
- Our website is food Ecommerce website with 100% cyber security/fraudulent.
- Help to find value for money restaurant in Kolkata specially for new visitor
- Help entrepreneur to start their food business.

- **PROBLEM STATEMENT**

1. We took inspiration from swiggy and zomato and wanted to make our own food Ecommerce website.
2. Other website share the common interface and gives the common result in every devices
3. Users don't get a smooth usage of the websites and cannot regulate according to their wish.

Problem Solution:-

1. Our website is completely personalized and works only on the user's specific commands
2. Our website gives results according to the user's choices.
3. A smooth user friendly input and output interface is provided here.

- Experimental Setup and Analysis

- This is the user interface and output section, though we are working on it to make it better.

- This is the coding part.

CONCLUSION & FUTURE SCOPE:

Our team is always working to improve the service of the users where we provide accurate output with simple commands and try to make the AI as user friendly as possible, as everyone knows simple is more approachable. We are confident to prosper and are expected to extend our reach to a wider extent. We have separate teams to handle each matter separately to solve any problem faster. We do this to make sure users can get their responses as soon as they possibly can without much delay and get their apt responses within a short span of time. We also update our AI as frequently we can so we are always up to date to the present situation and are providing apt information about everything and always keep an eye on the trending things in the technical world so that customers can find it without wasting time searching for them. And we will try to improve and expand our AI in the near future like we can use the VR technology to show our users a preview of the café.

Bibliograpghy

- We take our reference from many present E-commerce food delivery website to make the user interface and many booking website of many restaurants to grasp the concept.

- The references:
    1. https://www.zomato.com/
    2. https://www.swiggy.com/
    3. https://www.dineout.co.in/
    4. https://www.google.com/maps/

- For the coding part we take help from some websites like:
    1. https://github.com/topics/html-website
    2. https://www.youtube.com/
